## LS-B、VS-B、Tracer-B、Tracer-A、iTracer、eTr acer Series Controller Communication Instruction

Modbus is an application layer packet transmission protocol and it lies in 7 layer of OSI model. It provides client / server communication between the different network equipment. Modbus is also a request / response protocol, and provides the services of function code.

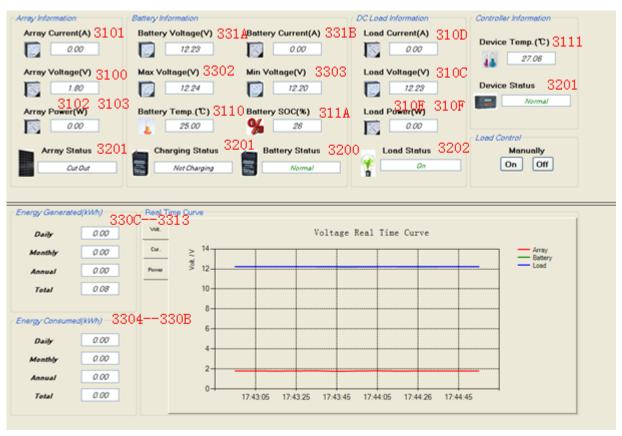

As a master / slave protocol, at the same time, there is only one master and one or more(Max 247) slave on the bus. Modbus communication is always initiated by the master, and if no request is received from the master to the slave, no data will be sent. The slaves can not communicate with each other, at the same time the master can only initiate one Modbus transaction.

Our product communication protocol has the following characteristics :

- 1. Communication protocol is standard Modbus-RTU protocol.
- 2. The default controller ID number is "1", we can modify the ID via PC common software or MT50 LCD unit (Tips: when modify ID, please make sure the bus only connects a controller. After modifying the ID, please recharge the controller.)
- 3. Serial communication parameters: baud rate 115200, data bits 8, stop bits 1, no data flow control.
- 4. Register address uses hexadecimal format, the base address offset is 0x00.
- 5. All 32-bit-length data uses two 16-bit registers to represent (L and H register, respectively), for example, the value of the array rated power is 3000, data

multiple is 100, the data of L register (address 0x3002) is 0x93E0 and the data of H register(address 0x3003) is 0x0004.

## Real Time Data: all system's real time data, real time status and the history statistics of energy generated and energy consumed.

| Numb<br>er | Variable name                      | Addr<br>ess | Function code | Description   | Unit | Times |
|------------|------------------------------------|-------------|---------------|---|------|-------|
| A1         | Over temperature inside the device | 2000        | 02 (read)     | 1 The temperature inside the controller is higher than the over-temperature protection point.  0 Normal |      |       |
| A2         | Day/Night                          | 200C        | 02 (read)     | 1-Night, 0-Day  |      |       |

#### Voltage parameters limit condition

- 1 Over voltage disconnect voltage>Charge limit voltage>Equalize charging voltage>Boost charging voltage>Float charging voltage>Boost reconnect charging voltage
- 2 Under voltage warning recover voltage>Under voltage warning voltage>Low voltage disconnect voltage>Discharging limit voltage
- 3 Over voltage disconnect voltage>Over voltage reconnect voltage
- 4 Low voltage reconnect voltage>Low voltage disconnect voltage

#### Warning

1 When the battery type is Sealed. Gel or Flooded, the customer only can set Charging mode. battery capacity. temperature compensation coefficient. equalize duration. boost duration (you can not set the Equalize duration when the battery type is Gel). Only when the battery type is User, the customer can set the other parameters (the parameters need to be set at the same time)

2 Battery discharge and battery charge can be set when the charging mode is SOC 3 The battery type and battery rated voltage level can not be User and Self-recognition at the same time

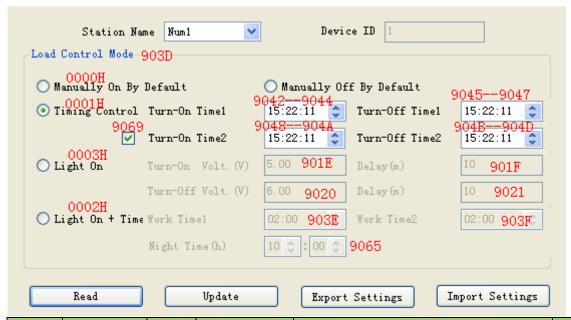

```
Read battery parameter (battery type: user rated voltage level: 12V)

#### Warning

- 1 First you should choose the load control mode (903D), then set the corresponding parameters.
- 2 Timing control (turn on/off time 2) is based on Timing control (time choose) (9069).

## **Pin Definition**

1. The RJ45 interface pin define for RS485 port of LS-B、VS-B、Tracer-B、Tracer-A series controllers is shown below:

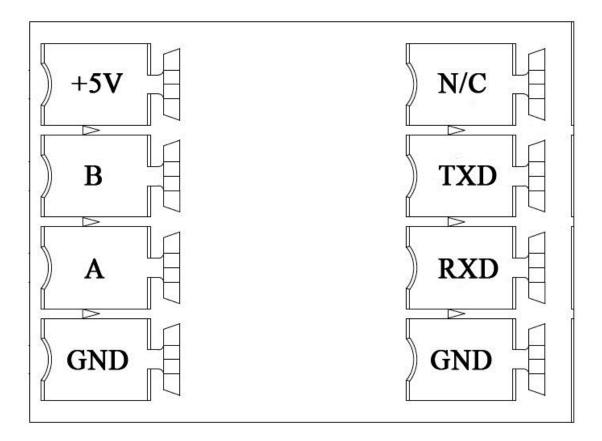

## Pins define:

| Pins | Define                     |
|------|----------------------------|
| 1    | Power supply output +5V or |
|      | +7.5V                      |
| 2    | Power supply output +5V or |
|      | +7.5V                      |
| 3    | RS-485-B                   |
| 4    | RS-485-B                   |
| 5    | RS-485-A                   |
| 6    | RS-485-A                   |
| 7    | Ground                     |
| 8    | Ground                     |

RJ45 plug pins are sorted by number, the sketch map is as shown above:

2. The interface pin definition for RS485 and RS232 port of iTracer、eTracer series controllers is shown below:

## Note:

- (1)To improve the communication quality, the Gound pins(connected with the negative terminal of the battery) could be used if necessary. However, the user must care the common ground problem of the connected devices.
- (2)Do not use the Vcc pins (+5v), or the controller may be damaged permanently.
